M<sub>M</sub>: Mean of the intralaboratory means, S<sub>M</sub>: Standard Deviation of the intralaboratory means.

S<sub>W</sub>: Intralaboratory standard deviation, S<sub>B</sub>: Interlaboratory standard deviation,  $S_b = \sqrt{S_M^2 - (S_W^2 \div 4)}$

The laboratory mean values have been examined statistically to eliminate outlying values. Where a “—” appears in the table it indicates that an outlying value has been eliminated by either the Cochran or Grubbs Test.

## DESCRIPTION OF THE SAMPLE

The sample is available in the form of chips passing a 1700  $\mu\text{m}$  aperture sieve from which the fines passing a 250  $\mu\text{m}$  aperture sieve have been removed. It is supplied in bottles containing 100 g...ref ECRM 186-1(C). It is also supplied in the form of 38 mm dia. discs...ref ECRM 186-1(D).

## INTENDED USE & STABILITY

The chip sample, ECRM 186-1 (C), is intended for the verification of analytical methods, such as those used by the participating laboratories, for the calibration of analytical instruments in cases where the calibration with primary substances (pure metals or stoichiometric compounds) is not possible and for establishing values for secondary reference materials.

It will remain stable provided that the bottle remains sealed and is stored in a cool, dry atmosphere. When the bottle has been opened the lid should be secured immediately after use. If the contents should become discoloured (e.g. oxidised) by atmospheric contamination they should be discarded.

The disc sample, ECRM 186-1 (D), is intended for establishing and checking the calibration of Optical Emission and X-Ray Spectrometers for the analysis of similar materials. The "as received" working surface of the sample should be lished before use to remove any protective coating. The disc will remain stable provided that it is not subject to excessive heat (e.g. during preparation of the working surface).

## TRACEABILITY

**The traceability of ECRM 186-1 has been established in accordance with principles of ISO Guides 30 – 35 and the International vocabulary of basic and general terms in metrology.**

The characterisation of this material has been achieved by inter-laboratory study, each laboratory using the method of their choice, details of which are given above. These methods are either stoichiometric analytical techniques or methods which are calibrated against pure metals or stoichiometric compounds. Most methods used were either international or national standard methods or methods which are technically equivalent.

## FURTHER INFORMATION

For information regarding the preparation, certification and supply of these European Certified Reference Materials (EURONORM-CRMs) and the use of the statistical information given on this certificate, please refer to CEN Report CR 10317 and ECISS Information Circular No. 5, both of which are available from the national standards body in your country or from CEN in Brussels. (In the UK this is the BSI, 389 Chiswick High Road, London W4 4AL).

Further information and advice on this or other Certified Reference Materials or Reference Materials may be obtained from the address below.

Pour disposer d'informations sur la fabrication, la certification et la distribution des Matériaux de Référence Certifiés Européens (EURONORM-MRC) ainsi que sur l'utilisation des informations statistiques données sur ce certificat, se reporter soit au producteur de ce Matériau de Référence Certifié, à l'adresse figurant sur ce Certificat soit au Rapport CEN CR 10317 et à la circulaire d'information No. 5 (ECISS). On peut se procurer ces deux documents auprès des organismes nationaux de normalisation ou auprès du CEN, Bruxelles. (Pour la France: AFNOR, 11 rue Francis de Pressensé, 93571 La Plaine St Denis cedex).

D'autres informations et avis au sujet de ce Matériau de Référence Certifié, ou de tout autre Matériau de Référence Certifié ou Matériau de Référence produits par le Bureau Of Analysed Samples Ltd, peuvent être demandés en contactant l'adresse figurant dans le bas de ce Certificat.
