Note: The acid insoluble residue from this sample contains a high proportion of some of the elements present. The residue must therefore be totally decomposed by fusion, dissolved and added to the bulk solution in order to obtain the correct values.

**DESCRIPTION OF THE SAMPLE**

This sample consists of material passing a 150 µm aperture sieve from which the fines passing a 53 µm aperture sieve have been removed  
It is supplied only in bottles of 100g.
