

PBDE Congeners in 2,2,4-Trimethylpentane

Art. ID NIST-2257
 Unit 5 x 1,2 mL
 Deliverydetails ADR Excepted Quantity (EQ) / AIR Excepted Quantity (EQ) UN1262 II E2

Description

This Standard Reference Material (SRM®) is a solution of 38 polybrominated diphenyl ether (PBDE) congeners in 2,2,4-trimethylpentane. This SRM is intended primarily for use in the calibration of chromatographic instrumentation used for the determination of PBDE congeners. A unit of NIST-2257 consists of five 2-mL ampoules, each containing approximately 1.2 mL of solution. // Sample value(s) - please ask for current certificate.
