Description

This Standard Reference Material (SRM) is intended primarily for use in validating analytical methods for the determination of phytosterols, beta-carotene, and gamma-tocopherol in extracts of *Serenoa repens* (saw palmetto) and similar matrices. This SRM can also be used for quality assurance when assigning values to in-house control materials. A unit of NIST-3251 consists of five ampoules, each containing approximately 1 mL of saw palmetto extract. /// Sample value(s) - please ask for current certificate.
