

Antimony Ore

Art. ID	CANMET-CD-1
Unit	200 g
Deliverydetails	No Dangerous Good /not restricted

Description

CANMET-CD-1 was prepared in 1975 from ore of the Lake George mine of Consolidated Durham Mines and Resources Limited at Prince William, New Brunswick. It contains significant concentrations of antimony and arsenic and, thus, should be especially useful in assessing methods in which there is potential interference between these elements. The following minerals are present in approximately decreasing order of abundance: quartz, mica, clay minerals, stibnite, pyrite, arsenopyrite, pyrrhotite, and traces of chalcopyrite and chalcostibite.

Text/Information	Analyte/Parameter	CAS number	Concentration/Value	Unit	Method	Source
	Antimony (Sb)	[7440-36-0]	3,57	%		
	Arsenic (As)	[7440-38-2]	0,66	%
