

Abridin

Art. ID	TRC-A109045-50MG
Unit	50 mg
Deliverydetails	De Minimis

Description

Application Note: Abridin is isolated from seed extracts of *Abrus precatorius*. Also, it is derived from Bisnorcholenaldehyde (B508830), which can be used to prepare 27-Nor- Δ^4 -dafachronic acid as a synthetic ligand of *Caenorhabditis elegans* DAF-12 receptor. It is also used to synthesize 3 β ,6 α -dihydroxy-5 α -cholan-23-one. Also, it is related to the parent compound Progesterone (P755900), which is a steroid hormone produced by the corpus luteum. Induces maturation and secretory activity of the uterine endothelium, suppresses ovulation. Progesterone is implicated in the etiology of breast cancer. This compound is a contaminant of emerging concern (CECs).
