

Tantalum Ore

Art. ID CANMET-TAN-1
 Unit 200 g
 Deliverydetails No Dangerous Good /not restricted

Description

CANet-TAN-1 is a sample of tantalum ore typical of the deposit at Bernic Lake, Manitoba. The tantalum occurs in wodgenite and microlite, which are found in zones of partially sericitized perthitic microcline and of relatively unaltered, fine-grained, bluish-white aplitic albite in the pegmatite deposit.

Text/Information	Analyte/Parameter	CAS number	Concentration/Value	Unit	Method	Source
	Tantalum (Ta)	[7440-25-7]	0,236 ± 0,005	%		
	Ta ₂ O ₅		0,288 ± 0,006	%
