

3-Acetylbenzoyl Chloride

Art. ID	TRC-A170995-5G
Unit	5 g
Deliverydetails	ADR Excepted Quantity (EQ) / AIR Excepted Quantity (EQ)

Description

Application Note: 3-Acetylbenzoyl Chloride is used in the synthesis of aminimides as potential CNS acting agents. Also, it is an intermediate used in the synthesis of 3-[(Dimethylamino)carbonyl]phenol (D461635), which can be used in the synthesis of novel purine and bicyclic pyrimidine, which are factor Xa inhibitors, and also have high selectivity over thrombin and trypsin.
