

## **NSVEC (Nitrogen Isotopes in Gaseous Nitrogen) - 300 µmol**

Art. ID	NIST-8552
Unit	glass tube
Deliverydetails	No Dangerous Good /not restricted

### Description

This Reference Material (RM) is intended for use in developing and validating methods for measuring relative differences in nitrogen (N) isotope-number ratios, R(15N/14N). Even though the value for this RM is a reference value and not certified, its use will improve the comparability of data from different laboratories. The equivalent name used by the International Atomic Energy Agency (IAEA) and the U.S. Geological Survey (USGS) for this RM is NSVEC (Nitrogen Svec: named for H. Svec, formerly of Ames Lab, IA). NIST-RM-8552 is supplied in a borosilicate tube containing approximately 300 µmol of N<sub>2</sub>.
