Description

This Standard Reference Material (SRM®) is intended primarily for use in evaluating the accuracy of procedures for the determination of the steroid hormones cortisol, progesterone, and testosterone in human serum. It is also intended for use in validating working or secondary reference materials. A unit of NIST-971 consists of two materials: one from a pool of healthy, premenopausal adult females and one from a pool of healthy adult males. Both materials are unfortified. Each vial contains 5.0 mL of human serum. Certified values /// Sample value(s) - please ask for current certificate.
