

Quality Attributes of Drug Products Applied to the Skin (On-Demand)

Art. ID	USP-CM-QA-01
Unit	Each
Deliverydetails	No Dangerous Good

Description

This webinar will discuss the main critical quality attributes that should be monitored and controlled during product development and/or for the shelf life of products applied to the skin. These products include, but are not restricted to, ointments, creams, gels, lotions, solutions, pastes suspensions, and passive transdermal systems (TDS).
