

eLearning: Global Regulatory Strategy for Pharmaceuticals

Art. ID	USP-RAPS-08
Unit	Each
Deliverydetails	No Dangerous Good

Description

"This eLearning course from USP provides a basic understanding of the challenges and goals confronting a regulatory professional when defining a global regulatory strategy. It provides an overview of the regulatory considerations in the major regions of the world where marketing applications are pursued and compares the application requirements in these regions. It also includes a description of the regulatory "tools" at the disposal of the regulatory professional and discusses reimbursement considerations and how they may affect both a global development and regulatory strategy. Finally, the course provides insight into the roles of cross-functional strategy teams. Collectively, this knowledge is critical to creating a global regulatory strategy for pharmaceuticals introduced in global markets."
