

RM-RILC is a reference material designed for the measurement of liquid chromatography retention indices based on N-alkylpyridinium-3 sulfonate standard. Each ampoule contains 20 homologous compounds, in methanol with approximately 1.3 % water. The RI values range from 100-2000

Art. ID NRC-RM-RILC
Unit 0,7 mL/ampoule
Deliverydetails De Minimis UN1230 (6.1) II E2

Description

RM-RILC is a reference material designed for the measurement of liquid chromatography retention indices based on N-alkylpyridinium-3 sulfonate standard. Each ampoule contains 20 homologous compounds, in methanol with approximately 1.3 % water. The RI values range from 100-2000

| Text/Information | Analyte/Parameter | CAS number | Concentration/Value | Unit | Method | Source |
|------------------|---|------------|---------------------|--------|--------|--------|
| | N-alkylpyridinium-3-sulfonate (NAPS) n = 0-2 | [n/a] | 45 ± 5 | µmol/L | | |
| | N-alkylpyridinium-3-sulfonate (NAPS) n = 3-19 | [n/a] | 100 ± 10 | µmol/L | | |
