Description

XRD Mineralogy Set - 50 different minerals - Unique assemblage of 50 naturally occurring minerals - Optical and x-ray diffraction comparisons - Fine 44 µm particle size - Alpha-numerically indexed - Wood case included. The XRD Mineralogy Set is a collection of 50 different mineralogical substances, most are rare, for non-destructive material characterization, analytical identification and comparison studies with diversified instrumentation inclusive of refractive index, birefringence microscopy and x-ray diffraction. Each mineral is initially hand selected for high concentration content, comminuted to a uniform particle size of 44µ (-325 mesh size) and blended to ensure uniform representation. Minerals Content:
