

Fatty Acid Methyl Esters in 2,2,4-Trimethylpentane

Art. ID	NIST-8182
Unit	5 x 1.2 mL
Deliverydetails	ADR Excepted Quantity (EQ) / AIR Excepted Quantity (EQ) UN1262 II E2

Description

This Reference Material (RM) is a solution of 26 fatty acid methyl esters (FAMEs) in 2,2,4-trimethylpentane. This RM is intended for use in evaluating analytical methods and chromatographic instrumentation used for the determination of FAMEs. A unit of RM 8182 consists of five 2 mL ampoules, each containing approximately 1.2 mL of solution. Due to the original NIST fatty acid determinations in SRM 2377 not being sufficiently traceable to the International System of Units (SI), SRM 2377 no longer meets international quality standards (ISO 17034) for serving as a certified reference material. However, the material continues to meet ISO 17034 standards as a reference material and is thus being offered as RM 8182. /// Sample value(s) - please ask for current report of investigation.
