Description

This Reference Material (RM) is a fresh frozen fish homogenate prepared from wild-caught coho salmon (*Oncorhynchus kisutch*) collected between Yakutat and Prince of Wales Island off the coast of Alaska, USA. RM 8256 is intended to support investigations of seafood safety and seafood authenticity using genetics, crude fat, fatty acids, and total protein. All constituents for which non-certified values are provided are naturally present in the homogenate. A unit of RM 8256 consists of two glass jars, each containing approximately 6 g to 8 g (wet basis) of frozen tissue homogenate. /// Sample value(s) - please ask for current report of investigation.
