

The Value of Pharmacopeial Reference Standards

Art. ID	USP-WEB-ValuePharmRS
Unit	Each
Deliverydetails	No Dangerous Good

Description

Pharmacopeial standards – like USP-NF monographs and general chapters – are data-driven and grounded in science. They are: Established by a transparent process, validated extensively, used by manufacturers and regulatory bodies to help ensure the quality of pharmaceutical products and facilitating access to affordable medicines. Where tests or assays in USP-NF monographs or general chapters call for the use of a USP Reference Standard, only those results obtained using the specified USP Reference Standard are conclusive. To learn more about how USP can help you to deliver conclusive results please register for the webinar.
