

**Anti-MMP-14 Antibody, catalytic domain, clone LEM-2/15.8 clone LEM-2/15.8,  
Chemicon(R), from mouse**

Art. ID SAF-MAB3328

Unit EA

**Description**

MT1-MMP plays an important role during endothelial cell migration and matrix remodeling. Although the role of MT1-MMP in endothelial cell motility is not fully characterized, its activity appears to modulate endothelial migration, invasion, and formation of capillary tubes during the angiogenic response (Galvez, 2001). Mt1-MMP also appears to play a key role in monocyte revruitment during inflammation (Salomon, 2005).
