Description

This Reference Material (RM) is a fresh frozen shrimp homogenate prepared from aquacultured whiteleg shrimp (*Litopenaeus vannamei*) collected from a land-based facility in Alabama, USA. NIST-8259 is intended to support investigations of seafood safety and seafood authenticity using genetics, crude fat, fatty acids, and total protein. All constituents for which non-certified values are provided are naturally present in the homogenate. A unit of NIST-8259 consists of two glass jars, each containing approximately 6 g to 8 g (wet basis) of frozen tissue homogenate. /// Sample value(s) - please ask for current report of investigation.
