

Polyethylene terephthalate (microplastiv powder)

Art. ID	BAM-P206
Unit	approx. 1 g
Deliverydetails	No Dangerous Good /not restricted

Description

BAM-P206 is developed as a reference material close to reality for the validation of sampling, sample preparation and detection of microplastics. It can be used either for the evaluation of effects in the field of ecotoxicology or human toxicology, pollutant transport and agglomeration behaviour related to microplastics.

Text/Information	Analyte/Parameter	CAS number	Concentration/Value	Unit	Method	Source
	Particle size D10		30,5 ± 2,3	µm		
	Particle size D50		62,6 ± 1,9	µm		
	Particle size D90		107 ± 4	µm
