

(R)-3-Amino-2-methylpropanoic Acid

Art. ID TRC-A617395-1G

Unit 1 g

Description

Application Notes: (R)-3-Amino-2-methylpropanoic Acid blood concentration increases in human body with exercise and may contribute to exercise-induced protection from metabolic diseases. It is a product of catabolism of thymine and is therefore present in low concentration in urine of patients with a deficiency of dihydropyrimidine dehydrogenase (DPD) which is vital in first step of pyrimidine degradation. /// References: Van Kuilenburg, A., et al.: Biochem.
