

AKB48 N-Pentanoic Acid

Art. ID TRC-A450120-50MG
Unit 50 mg

Description

Category: Pharmaceuticals, Intermediates and Fine Chemicals /// Application Notes: AKB48 N-Pentanoic Acid is a metabolite of AKB48 (A450100), a pentyl indazole that mimics JWH 018 adamantyl carboxamide and STS-135, which are synthetic cannabinoids (CBs) that may be sold for recreational use. AKB48 is intended for research and forensic applications. /// References: Uchiyama, N. et al.: For. Toxicol., 30, 114 (2012)|
