

Arginine Vasopressin-d5

Art. ID TRC-A769552-25MG
 Unit 25 mg

Description

Category: Isotope Labelled Compounds, Peptides, Pharmaceuticals, Intermediates and Fine Chemicals // Application Notes: Labelled Arginine Vasopressin. An endogenous antidiuretic hormone in most mammalian species. It is released into the blood from nerve terminals in the posterior pituitary and median eminence. It is a neurotransmitter in the central nervous system and also implicated in a variety of physiological processes such as regulating water balance by antidiuretic action. It is a peptidic V1a receptor agonist that produces vasoconstriction via V1aR-mediated vascular smooth muscle cell contraction and is being used to increase blood pressure in septic shock, a form of vasodilatory hypotension. // References: Perucca, J. et al.: J.
