## **Titanium Dioxide Nanomaterial**

Art. ID NIST-1898

Unit 15 g

Deliverydetails No Dangerous Good /not restricted

## Description

This Standard Reference Material (SRM®) is intended primarily for use as a benchmark and investigative tool for evaluation of the potential environmental, health, and safety risks that may be associated with manufactured nanomaterials during their product life-cycle. This SRM is also intended for use in the calibration and performance testing of gas sorption instruments used for determining the Brunauer-Emmet-Teller (BET) specific surface area of powders and porous solids. A unit of NIST-1898 consists of an amber glass bottle containing nominally 15 g of mixed-phase (anatase and rutile) nanocrystalline titanium dioxide (TiO2) in the form of a dry agglomerated powder. /// Sample value(s) - please ask for current certificate.
