

Controlled Pore Glass - BET Specific Surface Area (300nm)

Art. ID	NIST-2206
Unit	5 g
Deliverydetails	No Dangerous Good /not restricted

Description

This Standard Reference Material (SRM®) is intended for the calibration and performance testing of instruments used for the determination of the Brunauer-Emmett-Teller (BET) specific surface area (SSA) by the static volumetric gas sorption technique. A unit of NIST-2206 consists of one bottle containing approximately 5.1 g of high-purity granulated controlled-pore glass with a nominal pore diameter of 300 nm. This SRM is certified for BET SSA determined by nitrogen gas sorption at liquid nitrogen temperature (77.3 K) using commercial instrumentation. /// Sample value(s) - please ask for current certificate.

Text/Information	Analyte/Parameter	CAS number	Concentration/Value	Unit	Method	Source
Measurement Technique: MP	Specific surface area (BET)		10,99 ± 0,68	m2/g		
Measurement Technique: SP	Specific surface area (BET)		10,73 ± 0,68	m2/g
