### Description

This Standard Reference Material (SRM®) is intended for use in calibrating differential scanning calorimeters (DSC), differential thermal analyzers, and similar instruments. A unit of NIST-2234 consists of a small ingot (approximately 2 g) of high purity gallium (99.999 99 %), sealed in a polyethylene vial. The enthalpy of fusion and the fusion temperature were measured in an adiabatic calorimeter. /// Sample value(s) - please ask for current certificate.
