

Abacavir-d4

Art. ID	TRC-A105002-1MG
Unit	1 mg
Deliverydetails	No Dangerous Good /not restricted

Description

Category: Isotope Labelled Compounds, Nucleotides, Bases and Related Reagents, Pharmaceuticals, Intermediates and Fine Chemicals /// Appearance: Off-White to Light Beige Solid /// Application Notes: Abacavir-d4 is deuterium labeled Abacavir (A104990). Abacavir is a carbocyclic 2'-deoxyguanosine nucleoside reverse transcriptase inhibitor and an anti-HIV drug used to treat HIV infection (1). Intracellular enzymes convert Abacavir to its active form, carbovir-triphosphate (CBV-TP), which then selectively inhibits HIV reverse transcriptase by incorporating into viral DNA (2). Abacavir is metabolized in the liver by uridine diphosphate glucuronyltransferase and alcohol dehydrogenase resulting in inactive glucuronide and carboxylate metabolites, respectively.
