

## 1,6-Anhydro-beta-D-glucopyranose

Art. ID TRC-A648100-1G  
 Unit 1 g  
 Deliverydetails No Dangerous Good /not restricted

### Description

Category: Carbohydrates and Derivatives /// Appearance: White Solid /// Application Notes:

1,6-Anhydrohexopyranoses have proven to be valuable synthons for the preparation of biologically important and structurally diverse products (e.g. rifamycin S, indanomycin, thromboxane B<sub>2</sub>, (+)-biotin, tetrodotoxin, quinone, and macrolide antibiotics) as well as for modified sugars. The chemical/physical/toxicological properties have not been thoroughly investigated. Since it is known to be a minor component of certain food materials it may be regarded as of relatively low toxicity. /// References: Fraser-Reid, B., et al. J. Am. Chem.
