

Apigenin 7-Glucuronide

Art. ID TRC-A726505-1MG
Unit 1 mg

Description

Category: Inhibitors, Metabolites and Impurities /// Application Notes: Apigenin 7-Glucuronide is a metabolite of Apigenin, which induces the reversion of transformed phenotypes of v-H-ras-transformed NIH 3T3 cells at low concentration (12.5 uM) by inhibiting MAP kinase activity. Also inhibits the proliferation of malignant tumor cells by G2/M arrest and induces morphological differentiation. Apigenin has also been reported to enhance the gap junction intracellular communication in liver cells. /// References: Chaumontet, C., et al.: Carcinogenesis, 15, 2325 (1994), Sato, F., et al.: Biochem.
