

8-Amino-7-oxopelargonic Acid Hydrochloride

Art. ID TRC-A618750-5MG
Unit 5 mg

Description

Category: Aliphatics /// Appearance: Light Beige Solid /// Application Notes: An intermediate in the synthesis of biotin. Pimeloyl-CoA is transformed into AOP in the presence of L-alanine by the enzyme AOP synthase. The catalytic mechanism of AOP synthase has been studied for the elucidation of inhibitors as potential antimicrobial agents. /// References: Ohsugi, M., et al.: J. Nutr. Sci.
