

Adamantane-d16

Art. ID	TRC-A207802-500MG
Unit	500 mg
Deliverydetails	De Minimis

Description

Category: Isotope Labeled Compounds /// Appearance: White Waxy Solid /// Application Notes: Adamantane-d16 is used in the fast catalytic hydroxylation of hydrocarbons with ruthenium porphyrins. Unlabeled adamantane derivatives have been used to treat influenza, as well as serve as NMDA receptor channel blockers for a wide range of pharmaceutical application. /// References: Wang, C. et al.: Inorg.
