

2-Amino-4-methylpyrimidine

Art. ID TRC-A616230-5G
Unit 5 g
Deliverydetails No Dangerous Good

Description

Application Notes: 2-Amino-4-methylpyrimidine is a compound involved in a study about carbonylation as a key reaction in anaerobic acetone activation by *Desulfococcus biacutus*. 2-Amino-4-methylpyrimidine is formed as the product of a reaction between acetoacetaldehyde and guanidine. /// References: Acosta, O.B., et al.: Appl. Environ. Microbiol., 79, 6228-6235 (2013)
