

Amorphadiene

Art. ID TRC-A634365-2.5MG
Unit 2,5 mg
Deliverydetails No Dangerous Good

Description

Application Notes: Amorphadiene is a sesquiterpene synthesized via the cyclization of farnesyl pyrophosphate and a precursor in the biosynthesis of Artemisinin (A777500), which is an effective antimalarial agent used to treat malaria. Genetically modified *Saccharomyces cerevisiae* can be utilized as an alternative semisynthetic strategy to produce artemisinin from amorphadiene. /// References: Wallaart, T.
