

A77 1726 (E/Z) Mixture

Art. ID	TRC-A771720-1G
Unit	1 g
Deliverydetails	No Dangerous Good /not restricted

Description

Category: Metabolites and Impurities, Tyrosine Kinase Inhibitors, Pharmaceuticals, Intermediates and Fine Chemicals /// Appearance: White Solid /// Application Notes: rac A77 1726 is the active metabolite of Leflunomide, a potent disease-modifying antirheumatic drug used in the treatment of rheumatoid arthritis. LEF-M interferes with dendritic cell function. The second Phase III study evaluating the efficacy of Genzyme's teriflunomide therapy against relapsing forms of multiple sclerosis found the once-daily oral drug to be no less effective than injectable interferon beta 1a (Rebif®). /// References: Kirsch, B.M., et al.: Arthritis Research and Therapy, 7, 3, R694, (2005)
