

## **Aflatoxin B1**

Art. ID TRC-A357460-10MG  
Unit 10 mg  
Deliverydetails De Minimis UN2811 I E5

### **Description**

Category: Chiral Reagents, Heterocycles, Metabolites and Impurities, Pharmaceuticals, Intermediates and Fine Chemicals /// Appearance: White to Light Yellow Solid /// Application Notes: Aflatoxins B1, B2, G1, G2 as secondary metabolites of fungal species such as *Aspergillus flavus* or *Aspergillus parasiticus* growing on a variety of foods (peanuts, nuts, spices, cereals). Aflatoxins are a group of very carcinogenic mycotoxins with hepatotoxic effects. Aflatoxin is biotransformed to genotoxic intermediates by P450 Phase I enzymes, mainly CYP3A4 via aflatoxin B1 3-hydroxylation. Detoxification depends on Phase II enzymes, such as Glutathione S-Transferase and AFB(1)-aldehyde reductase (AFAR). Aflatoxin B1 is one of the most potent environmental mutagens and carcinogens known. Environmental contaminants, Food contaminants /// References: Cifford, R., et al.: Nature, 209, 312 (1966)| Wogan, et al.: Food Cosmet. Toxicol., 12, 681 (1974)| Sinz, M.W., et al.: J. Toxicol.
