

Aglepristone

Art. ID TRC-A430055-500MG
Unit 500 mg

Description

Application Note: Aglepristone is used as a treatment to induce parturition in ewes and their newborns. A competitive progesterone antagonist for treatment of various progesterone-dependent physiology and pathology conditions, and effective means of terminating pregnancy in most species. Also, it prevents sperm progression toward the oviducts and fertilization in inseminated females.
