

Fortified human milk - Organic contaminant

Art. ID	NIST-1954
Unit	5 vials x 5 mL
Deliverydetails	Dry ice shipment /not restricted

Description

This Standard Reference Material (SRM) is intended for use in evaluating analytical methods for the determination of selected polychlorinated biphenyl (PCB) congeners, chlorinated pesticides, and polybrominated diphenyl ether (PBDE) congeners in human milk and similar matrices. Reference concentration values are provided for polychlorinated dibenzo-p-dioxins (PCDDs) and polychlorinated dibenzofurans (PCDFs), as well as some inorganic constituents. An information concentration value is provided for the PCB mixture Aroclor 1260. A unit of NIST-1954 consists of five bottles of approximately 5 mL fortified human milk. /// Sample value(s) - please ask for current certificate.
